

Values !

- Values are immutable
- create new values instead of changing them

• Object class

```
object Values {  
  def main(args: Array[String]): Unit = {  
    val favoriteDessert = "Pumpkin Pie";  
    println(favoriteDessert);  
  }  
}
```

OUTPUT:
Pumpkin Pie

Types:

- Everything In Scala Has a type
- has Static type system
- catches errors at compile time

Reminder: Her Videos may need tweaking to the code just an FYI !!!

Use GeeksforGeeks or chatgpt to figure out issues!!!!

After println or Any print no need for semicolon ;(

How to Define a Function

```
object Functions{  
  def main(args: Array[String]): Unit = {  
    println(sum(2,2));  
    println(lightSwitch(true);  
    println(lightSwitch(false);  
    def sum(n1: Int, n2, Int): Int = n1+n2
```

```
    def lightSwitch(switchon: Boolean): String = if (switchOn) "light on!" else "light  
off!";
```

OUTPUT:

4
light on !
light off !

Challenge 2

```
object Challenge2 {  
  def main(Args: Array[String]): Unit = {  
    // Write a function called product which takes two parameters of type int and multiply them  
    together  
    def product(parum: Int, parum2: Int, parum3: Int): Int = parum * parum2 * parum3;  
    println(product(3,29, 19))  
  
    /*  
    Write a function called greeting, which takes a parameter called Name of type String and  
    outputs  
    a String; the parameter should have a default value, so that an appropriate String is  
    outputted if the  
    function is called without a parameter.  
    */  
    println(greetingPerson(greets = false))  
    println(greetingPerson(greets = true))  
    def greeting(n1: String): String = "David";  
    def greetingPerson(greets: Boolean = false): String = if (greets) "Hello David, How is your  
day?"  
else "You no welcome.... >:["  
  }  
}
```

I have did the second challenge a bit different since I was trying to figure out on my own; the programmer does it a bit different or follows a bit better the instructions I just wanted to reinforce the previous material and continue to explore other options
